

Pave a path to successful data transformation with great data

Successful data transformation projects and initiatives rely on the quality of the data provided to them.

More than 80% of data migration projects fail or go significantly over budget and/or time with poor data being a huge contributor

“By harnessing the power of data, project managers can make informed decisions, enhance project outcomes and drive organizational success” - *LinkedIn*

Data is the foundation for success. Be sure the data behind your efforts is accurate and reliable.

AQA helps transformation teams focus on delivering you towards success.

Here's how..

Quality projects and transformations

Whatever the transformation or project, without human-error-free data, you risk failure. And de-risking projects and initiatives is critical to success.

Using a tool to ensure the quality of your input data just makes sense. That's where AQA comes in.

AQA is a cloud-based tool that helps project managers, teams, and transformation leaders spot potential data problems, fast.

Easily spot data issues

AQA's traffic light model helps you see if data:

- Is formatted wrong
- Has been incorrectly entered
- Is missing or repeated
- Values aren't in a range you need

Upload and go

If it's an Excel or CSV file from your CRM, AQA will quickly spot issues.

- Works with any tabular data
- Easy, clear, and simple interface
- Find, share, and solve data errors together
- Cloud-based, available when you need it
- You control your data rules and alerts

A continuous learning loop

Each time you upload data into AQA, the AI engine learns and gets better at spotting errors.
